

Why choose a diverse connection with Vorboss?

Choosing Vorboss for diverse connectivity is more secure and reliable than using multiple providers, here's why:

Data centre diversity

Multiple PoPs across the UK and Europe. If one goes down, service switches seamlessly, no downtime.

Geographical diversity

Vorboss fully owns its network. No shared routes. Outages are rerouted instantly, end-to-end.

Internet route diversity

Connected to four Tier 1 transit providers. If one fails, traffic is rerouted automatically.

Simplicity

One provider. No juggling SLAs, protocols, or support teams. True diversity, made simple.

Network resilience

	Vorboss	Most providers
Fibre ownership	✓ Fully owned and operated by Vorboss	× Leased lines via third-party infrastructure
Infrastructure diversity	✓ Multiple PoPs provided as standard	× PoP diversity treated as a bespoke request
Geographical diversity	✓ Guaranteed diverse routes included as default	× Single route, reliant on existing circuits in shared ducts
Network diversity	✓ Thousands of BGP peers and multiple upstream providers	× Same upstream provider across circuits
Cost	✓ No premium charge for diversity	× Additional charges applied for diverse routing
Contract	✓ Flexible terms, no price increases	× Rigid contract, annual price increases
Simplicity	✓ Solution with one provider	× Complex procurement and circuit management
